

IN THE ABSTRACT

Please amend the Abstract appearing at page 126, lines 2-13 as follows:

A method of producing an electron-emitting device includes the steps of forming a pair of electrodes and an electrically-conductive thin film on a substrate in such a manner that the pair of electrodes are in contact with the electrically conductive thin film and forming an electron emission region using the electrically-conductive thin film, wherein ~~the method is characterized in that~~ a solution containing a metal element is supplied in a droplet form onto the substrate thereby forming the electrically-conductive thin film.
